## DETAILED ACTION

### *Response to Arguments and Amendments*

1. Remarks were submitted September 11, 2006. The claim status section of the Remarks was not correct. Claim 21 was cancelled, as well as claim 11. Reflection of the current status of the claims is cited below.

2. Claims 1-6, 8-10, 12-20 and 22-25 are pending.

Claims 1, 12, 22 and 23 have been amended.

Claim 25 has been added.

Claims 11 and 21 have been cancelled.

Claims 1-6, 8-10, 12-20 and 22-25 are examined on the merits.

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### *Maintained Rejections*

#### *Claim Rejections - 35 USC § 112*

4. The rejection of claims 4, 12-22, 24 and newly added claim 25 under 35 U.S.C. § 112, first paragraph, as failing to provide an adequate written description of the invention and failing to provide an enabling disclosure without complete evidence either that the claimed biological materials are known and readily available to the public or

Application/Control Number: 10/008,062	Page 3
Art Unit: 1642	

complete evidence of the deposit of the biological materials is maintained and newly made.

Applicants reassert, "the present invention is directed to the new use of a known compound.", see page 7, first full paragraph of Remarks submitted September 11, 2005. Applicants also aver the <sup>131</sup>I-labeled chimeric 81C6 monoclonal antibody was described in U.S. Patent No. 5,624,659 and the patent file reveals the antibody's sequence. Applicants conclude arguments noting they are willing to deposit the hybridoma that produces the 81C6 antibody in a recognized depository once the claims are deemed allowable. These points of view and arguments have been considered, but found unpersuasive.

Until the assurances under the Budapest Treaty and/or deposit are met in the instant application the instant rejection is made and maintained for the reasons of record.

### ***Claim Rejections - 35 USC § 103***

5. The rejection of claims 1-6, 8-24 and newly added claim 25 under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent number 5,624,659 (April 29, 1997/ reference 1 from IDS submitted June 14, 2002), and in view of Rizzieri et al. (Blood 94(10), Part 2, Supplement 1: 4339, Abstract #4339 November 1999/ reference 3 from IDS submitted June 14, 2003) is maintained and newly made.

Applicants set forth the criteria needed to establish a *prima facie* case of obviousness, see page 8 of the Remarks. Applicants assert the currently amended

Art Unit: 1643

claims including the requirement that the lymphoma will be treated with an antibody to tenascin is administered intravenously or intra-arterially is not taught by the prior art references, see page 8, section A. This particular type of administration does not preclude one of ordinary skill in the art from implementing the teachings of both references. Applicants' arguments encompass information and observations regarding brain cancer treatment implementing the monoclonal antibody 81C6. These arguments are not commensurate in scope. All of Applicants' arguments and supporting documents read on gliomas and intracranial malignancies, see bridging paragraph of pages 10 and 11 of the Remarks. The instant claims read on treating lymphoma. Not only are the arguments not commensurate because they read on a patentably distinct tumor type and as noted in the Action mailed March 10, 2006, but also because the radiosensitivity displayed by a solid tumor opposed to a hematological cancer is dissimilar as noted in the bridging paragraph of pages 5 and 6. And while the cited references may have shown to be unsuccessful in treating brain tumors there not sufficient information teaching away from the combination of the prior art. Applicants continue to assert their claimed method demonstrated unexpected and unobvious results, see bridging paragraph of pages 13 and 14. These points of view are not persuasive for the reasons of record, see bridging paragraph of pages 5 and 6 of Action mailed March 10, 2006.

The combination of the prior art references' teachings would have lead one of ordinary skill in the art to arrive at the claim invention at the time with a reasonable expectation of success. Both references provide suggestion and motivation to establish

Art Unit: 1643

and arrive at the claimed invention, accordingly the rejection is maintained and made, see the Action mailed March 10, 2006.

### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
